

Cold Weather Solutions

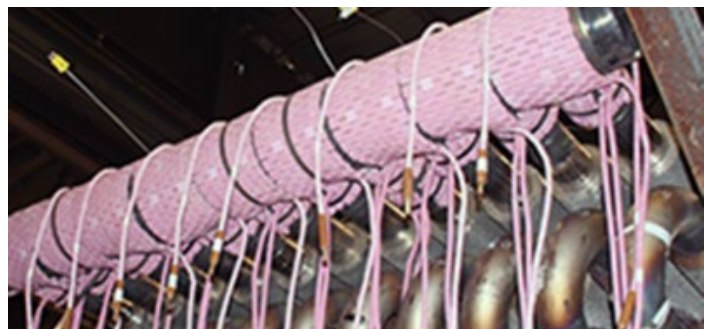

Prevent sudden, unplanned shut-downs of critical assets due to cold weather!

Unusual or unexpected cold weather can have severe consequences for fixed pressure equipment, particularly if it was not a facility design consideration. When Mother Nature provides a complimentary but undesired isolation freeze plug, TEAM is available to ensure assets remain operational with our Line Thaw and Leak Repair Solutions. Better yet, the Pre-Wrap of known/potential problem areas in advance is a proactive tactic and provides the most economical insurance policy!

Leak Repair Solutions

- + Allows damaged equipment to be repaired while on-line
- + Trained and Certified technicians repair leaks using a full range of techniques
- + Immediate stop-gap solutions and fully engineered long-term repairs.
- + TEAM holds a significant inventory of repairs for straight lines, bends and standard flanges.
- + For non-standard geometry, custom repairs can be expedited

Pre-Wrap Solutions / Product Line Thaws

- + Proactive pre-wrapping greatly reduces response time
- + Target chronic areas of concern (repeat offenders)
- + Safely heat up vessels, valves, and associated piping systems
- + Gets product flowing again, while reducing back pressure and component stress
- + Significant equipment and manpower resources provide Rapid Responses
