

The TEAM logo is displayed in a white box with a blue border. The word "TEAM" is in a bold, blue, sans-serif font. A small registered trademark symbol (®) is located to the upper right of the logo box.

TEAM

Maintenance and Repair

TEAM offers a wide range of maintenance and repair solutions backed by decades of technical and operational experience. Explore our field-proven services to find the one that's right for you, then contact a TEAM expert to get started.

Leak Repair Services

TEAM's on-stream repairs utilize composite repair, drill and tap repair, and both standard and custom-designed clamps and enclosures for piping systems and related equipment. We use specially developed techniques, sealants and equipment to make repairs online. Repair materials such as clamps and enclosures are custom designed and manufactured at our ISO-9001-certified manufacturing centers.

Composite Repair

Expedite code compliant repairs to pipeline assets suffering external corrosion. TEAM developed standard engineering packages to simplify selection and installation of repairs to wall thinning caused by external corrosion. This turn-key approach ensures that projects are executed to the highest safety & quality standards, with zero handoffs.

Emissions Control Services

Designed to monitor and record VOC emissions from specific process equipment and piping components as required by environmental regulations and customer requests. TEAM provides fugitive VOC emission leak detection and repair (LDAR) services that include identification, monitoring, data management and reporting primarily for the chemical, refining and natural gas processing industries.

Hot Tapping Services

Eliminate line shutdowns and loss of product. TEAM's hot tapping services consist of providing a full range of hot tapping, line stop and freeze stop services along with specialty stop capabilities. Our Hi-stop® is a proprietary and patented procedure that allows stopping of the process flow in extreme pressures and temperatures.

Valve Insertion Services

TEAM offers professional installation services for our patented InsertValve™. The valve installs under pressure, eliminating the need for line shutdowns in the event of planned or emergency valve cut-ins. If a repair is ever needed, it is the only valve on the market that can be repaired under pressure.

Valve Repair Services

TEAM performs on-site and shop repairs on a wide range of valves, including manual, control, pressure, safety and more. We are certified and authorized to perform testing and repairs to pressure and safety relief valves by The National Board of Boiler and Pressure Vessel Inspectors.

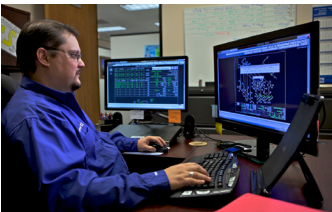

Field Machining Services

TEAM uses portable machining equipment to repair or modify machinery, equipment, vessels and piping systems not easily removed from a permanent location. Field machining services include flange facing, pipe cutting, line boring, journal turning, drilling and milling.

Technical Bolting Services

TEAM's technical bolting services involve the use of hydraulic or pneumatic equipment with industry-standard bolt tightening techniques to achieve reliable and leak-free connections following plant maintenance or expansion projects. Additional services include bolt disassembly and hot bolting, which is a process to remove and replace a bolt as the equipment is operating.

Mechanical Integrity Services

TEAM's MI programs ensure the continued integrity and fitness for service of piping systems, pressure vessels, tanks and related components. Our mechanical integrity engineers are extremely well versed in pertinent codes and standards of OSHA process safety management (PSM) and EPA risk management program (RMP) regulations.

CONTACT US TODAY

TEAM minimizes equipment and asset downtime by providing industry-leading on-line maintenance, inspection and repair solutions. Our experts are available 24 hours a day, 7 days a week, 365 days a year to help you get back up and running.

For over five decades, TEAM Inc. has provided asset integrity to diverse industries, including oil and gas, aerospace, petrochemicals, pipeline, and power generation. Our integrated service approach covers everything from inspection to repair, ensuring our communities operate safely and efficiently.
